

ANTIOXIDANT MASK

ALPS **Antioxidant Mask** has been specifically designed to be applied in both dermocosmetic and dermatological fields. The effectiveness of this mask is due to the concentration of lipophilic antioxidants within the gel formulation.

The lipophilic antioxidants are able to penetrate the double lipid layers that surround our cells, and neutralize the peroxides and hydroxyls which are the by-products of oxidative stress reactions.

The **Antioxidant Mask** may reduce acne and may prevent anti-aging.

Instructions for use:

- Cleanse thoroughly your face
- Apply any cosmetic or therapeutic cream or serum
- Remove the mask from its packaging and apply it with the gel side in contact with the face
- Keep it in place for about 20 minutes
- Reusable: apply daily for one month - washable with water and facial cleansers

HOT MASK

ALPS **Hot Mask** is intended to be used in combination with topical agents (creams, serums, ointments) that should be applied to the skin to enhance and accelerate the absorption.

After being properly heated, the ALPS **Hot Mask** stimulates microcirculation in the skin, facilitating the penetration of active agents into the dermal layer.

It has been widely demonstrated that when the skin temperature rises, absorption of topical agents improves as it decreases the viscosity of the sebum.

ALPS **Hot Mask** therefore allows deeper penetration of the active ingredients contained in the applied topical agents.

Instructions for use:

- Place the mask in a suitable container and immerse it in hot water for about 4-5 minutes
- While waiting, cleanse thoroughly your face and apply your cosmetic or therapeutic cream
- As soon as the gel becomes transparent, the mask is ready for use
- Remove the mask from the water with the help of tongues and dry it thoroughly
- Check the temperature with the back of the hand and, if necessary, allow it to cool to the desired temperature before wearing it
- Apply the mask with the gel part in contact with the face and apply pressure for a perfect adherence
- The mask will keep the heat for 10 minutes
- As the mask begins to cool, it will harden and maintain the shape of the user's face
- Reusable: apply daily for one month - washable with water and facial cleansers

MASK RETAINER

ALPS **Retainer** is designed to ensure a perfect fit to the face for any ALPS masks, as well as any other mask on the market.

The **Retainer** is heated and thermoformed directly on the face applying pressure where necessary.

This product will allow you to perfectly cast the users facial features, therefore eliminating the need to thermoform again, unless desired. This allows the **Retainer** to be used for infinite applications.

Instructions for use:

- Heat 1.5 liters of water using for example a teapot or an electric kettle
- Remove the **Retainer** from its packaging and place it inside a container
- Pour the hot water into the container and wait about 25 seconds
- Cleanse thoroughly your face
- Place the **Retainer** on the face and apply pressure for a perfect fit and keep it worn until it becomes solid again
- The ALPS **Retainer** is therefore ready to be used in combination with other ALPS masks or with your favorite mask for a perfect fit
- Reusable: form 1 time and use forever

ALPS Cosmetic Masks

COLD MASK

ALPS **Cold Mask** may soothe the skin, reduce inflammation and redness, and may contribute to the rapid recovery and repair of the skin.

The strong antioxidant properties neutralize free radicals helping to reverse the aging process and may help make pores and wrinkles less visible.

It is recommended for reddened and irritated skin or for those that have undergone micro-traumas for example after chemical peeling, laser resurfacing, microneedling and dermarolling.

Instructions for use:

- Store the **Cold Mask** in the freezer for at least 20 minutes; in the meantime cleanse your face thoroughly
- Remove the mask from its packaging and apply it with the gel side in contact with the face
- Keep it in place for about 15 minutes or until it has returned to the initial temperature
- Reusable - Wash with water and facial cleansers
